

D-SERIES

COMPACT TRACK LOADERS

JOHN DEERE

You asked. We “D”elivered.

Loaded with customer-inspired enhancements, all four of our D-Series Compact Track Loaders offer roomier operator stations, quieter pressurized cabs with best-in-class visibility, and swing-out doors. You also have a choice of numerous productivity-boosting options including electrohydraulic (EH) joysticks with selectable control pattern and variable boom and bucket speed settings. Other innovative advantages include a highly efficient and easy-to-clean V-plenum cooling system. And easier-starting electronic fuel-injected PowerTech™E diesels. As always, grouped checkpoints, advanced diagnostics, and wide-open access help speed servicing, minimize maintenance, and lower daily operating costs. Read on to learn more about the differences in our D-Series that help you get more done, more reliably, for less. Then talk to your John Deere dealer.

	319D	323D	329D	333D
Net peak power	47.1 kW (63 hp) @ 2,300 rpm	51.4 kW (69 hp) @ 2,300 rpm	59.6 kW (80 hp) @ 2,000 rpm	66.7 kW (89 hp) @ 2,400 rpm
Rated operating capacity	863 kg (1,900 lb.)	1042 kg (2,295 lb.)	1317 kg (2,900 lb.)	1498 kg (3,300 lb.)
Tipping load	2542 kg (5,600 lb.)	3257 kg (7,175 lb.)	3768 kg (8,300 lb.)	4279 kg (9,425 lb.)*

*With one-set standard counterweight.

Open wide and be wowed.

With a noticeably larger entryway and all-glass curved door providing wide-open access, getting in and out of our CTLs has never been easier. Operators are also going to like what they see inside the D-Series. All-around visibility is even more expansive, for a virtually unrestricted view that's second to none. The all-new pressurized cab is 50-percent quieter. More spacious, too, with an extra 152 mm (6 in.) of headroom. A more efficient and effective HVAC system, more comfortable suspension seat, ample storage, and optional AM/FM/weatherband radio all help keep an operator comfortably productive.

1. Standard amenities include a storage box, cup holder, 12-volt power port, iPod™/cell-phone holder, and other nice D'tails.
2. We've got your back with a sculpted mechanical-suspension seat (standard on 323D, 329D, and 333D) helping smooth the ride. For even more comfort, opt for an available fabric-covered air-suspension seat in cab-equipped models.
3. Although not exactly a sunroof, the bolt-on top window on cab-equipped CTLs removes quickly for increased ventilation and/or easy cleaning.

With 100-percent more front glass, a 50-percent larger top window, and lower side windows, it's easy to see why visibility is best in class. For clear sightlines to the action in front, beside, and behind you.

HVAC system delivers 50-percent more airflow to keep the operator comfortable year-round. Eight automotive-style vents can be directed from head to toe, as well as on the front glass for effective defrosting.

Optional cab is sealed and pressurized to keep out dust and noise. Plus, it's 50-percent quieter, so you'll be able to hear the optional radio.

Pull-down padded lap bar provides quick, convenient operator restraint. It's adjustable up or down to provide comfortable arm support.

Triple-interlock operator-presence system automatically applies the brakes when the lap bar is raised, operator leaves the seat, or the engine is shut down.

Do things your way.

With three different styles of available controls on all four D-Series models, you decide how the work gets done. Foot controls are standard. Or opt for hands-only levers, or EH joysticks for steering, forward/reverse, and boom/bucket functions. EH joysticks provide low-effort fingertip control and smooth machine response. Add the optional EH Performance Package and you can customize performance for specific tasks or conditions.

1

2

3

1. Overhead panel conveniently places machine info on the left and control switches to the right. Easy-to-read LCD monitor provides access to a wealth of machine info and control, including vital operating conditions and advanced diagnostics.

2. Fatigue-beating joysticks allow you to work more productively, precisely, and comfortably. Buttons, triggers, and dial control auxiliary hydraulics and flow rates, two-speed transmission, and bucket float.

3. Want to make the most of our vertical-lift boom design? Add the self-leveling option. Combined with parallel-lift throughout the lift path, it's perfect for a multitude of material-handling tasks.

Optional hands-only controls and EH joysticks come equipped with a floor-mounted foot throttle.

Electronic rotary throttle lets you dial-in the engine speed you need for maximum fuel economy or full engine power.

Available with optional joysticks, the EH Performance Package lets an operator customize skid-steer operation and response to personal preferences:

- **Creep mode** decreases ground speed in 10-percent increments while maintaining maximum hydraulic flow. It's ideal for work with cold planers or trenchers.
- **Boom and bucket speed-rate limits:**
 - **Precision mode** limits top speed and provides precise hydraulic metering for work near critical structures.
 - **Utility mode** provides smooth and balanced metering for normal operation.
 - **Production mode** delivers faster joystick response for stockpiling and truck loading where precision isn't as important.
- **Switchable control pattern** goes from ISO to H-pattern at the touch of a fingertip.

Optional digital-coded anti-theft system includes automatic end-of-day activation.

Get on the right tracks.

Want a CTL that's more able? Choose ours. With more breakout force, tractive effort, ground speed, and bucket capacity, all four deliver unmatched performance in virtually every significant category. And with their optimal weight distribution, low center of gravity, high ground clearance, and superior balance, no other compact track loader is as stable. Or as sure-footed on slopes.

1. Impressive bucket breakout and tractive effort yield best-in-class pushing, prying, and digging power.
2. Thirty-five degrees of rollback help ensure that bucket loads reach their destination — instead of somewhere in between.
3. Fast ground speeds and large bucket capacities enable these nimble material movers to make the most of every cycle. For an even quicker top-end, opt for the two-speed transmission.

Nothing lifts like a Deere. With tipping-load capacities up to 4279 kg (9,425 lb.), these CTLs let you precisely place pallets and handle even the most daunting material-handling tasks.

Fuel-sipping PowerTech™ E diesel engines meet EPA Tier 3/EU Stage IIIA (329D, 333D) and EPA IT4/EU Stage IIIB (319D, 323D) regulations. Exclusive electronic injection delivers significant torque rise and more usable power. Saves fuel, reduces noise, and improves cold starting, too.

A change in the weather doesn't have to mean a change in plans. High-flotation tracks enable these compacts to work where rubber-tire machines can't.

Need a little more flotation or a little less width? A 400-mm (15.8 in.) track option lets you decrease ground pressure on the 323D. Or narrow the stance of the 333D.

Make the most of your investment.

With their go-everywhere undercarriage, standard auxiliary hydraulics, and universal Quik-Tatch™, D-Series CTLs are highly versatile machines. To take full advantage of their capabilities, add any of the many available Worksite Pro™ attachments. Our ever-expanding lineup includes more than 100 choices that can help you get work done more easily. And expand your business opportunities. To learn more about the entire Worksite Pro attachment lineup, see your John Deere dealer.

Available attachments:

- | | |
|--|-----------------------------|
| Ag forks | Pallet forks |
| Augers | Power rakes |
| Backhoes | Rock buckets |
| Bale spears (round, square) | Roller levels |
| Blades (snow, utility) | Rotary cutters |
| Breakers/hammers | Rotary tillers |
| Brooms (angle, pickup) | Scrapers (material, manure) |
| Cold planers | Side-discharge buckets |
| Dozer blades | Snow blowers |
| Grapples (ag utility,
brush-tined, scrap) | Snow pushers |
| Landplanes | Toothbar |
| Mulching head | Trenchers |
| Multipurpose buckets | 3-point hitch |
| | Vibratory rollers |

3

4

1. Whether you're planting trees or setting posts, we've got you covered. Our planetary auger is available with a wide variety of bit styles and diameters.

2. Landplanes provide a cost-efficient productive alternative for finish work. Front and rear cutting edges allow controlled grading and leveling in forward or reverse.

3. Rock buckets are ideal for removing debris and sifting and sorting material. Design retains rocks and refuse while grading.

4. Cleanup is quicker and easier with one of our tined or scrap grapples. Dual-action clamps provide superior material retention.

Nothing runs like a Deere, because nothing is built like one.

All CTLs travel on tracks, but that's where the similarity ends. Our D-Series boast numerous uptime-boosting advantages you don't find on other compact track loaders. Such as an innovative V-plenum cooling system with hydraulically driven fan. And electronic-ignition PowerTech E diesel engine. Other difference makers are more subtle, but no less significant. Beefier boom, integrated rear bumper, and heavier-duty power Quik-Tatch, to list just a few. Add to those a multitude of traditional John Deere durability advantages and the choice is easy. When you know how they're built, you'll run a Deere.

1. Industry-exclusive design separates coolers in an innovative V-shape configuration that's 20-percent more efficient. Large aluminum hydraulic cooler and radiator provide the necessary cooling capacity for high-ambient-temperature operation.
2. Hydraulic-driven variable-speed fan runs only as fast or as frequently as needed for improved power and fuel efficiency. Decreases noise and debris flow through the coolers, too. There's also an exclusive fan option that reverses automatically every 20 minutes, or at the click of a switch, to clear core-clogging buildup.
3. All-steel rollers, idlers, and sprockets are similar to those used on our highly durable larger crawlers. Metal-face seals and journal bearings further increase longevity.

Heavy-duty double-steel-reinforced rubber tracks last longer than those on other machines. Easy-clean undercarriage shortens end-of-day cleanout and reduces track wear due to dirt buildup.

Drive motors are heavy duty, and hoses are shielded for extra protection. Direct-mounted planetary final drives employ larger-than-usual bearings for one-of-a-kind reliability.

Spring-applied, hydraulic-released wet-disc park brakes are fully enclosed and never require adjustment.

O-ring face-seal hydraulic fittings virtually eliminate aggravating and costly oil leaks.

Switches and electrical connectors are sealed from moisture and dirt to help prevent corrosion.

Auto-shutdown system monitors engine and hydraulic vitals, and issues an audible warning when limits are exceeded. If necessary, it shuts down the machine to help prevent damage.

Getting to the heart of a Deere is easy. There's no need to raise the boom — just pivot the cab and remove the floor. Takes only minutes.

To help conserve fuel and prolong engine life, standard auto-idle reduces engine speed after the operator has vacated the seat. Full auto-idle (available with EH controls) slows the engine after five seconds of inactivity, and resumes preset engine speed with any movement of the joysticks.

Fluid-fill locations and checkpoints are grouped and color-coded. And a conveniently displayed maintenance chart helps ensure that nothing gets overlooked.

V-plenum design resists debris buildup and makes radiator and cooler cores easier to clean.

Unlike some CTLs that require complicated daily adjustments with special tools, track tension is checked weekly. If adjustment is necessary, all that's needed is a wrench and grease gun.

Compare the cost of parts and labor for recommended maintenance with other makes. The D-Series will save you significant money. Add the long-term expense for undercarriage replacement, and the savings can be substantial.

We've lowered the boom on maintenance.

Servicing a D-Series CTL is simple and quick. So simple, in fact, that you won't even have to raise the boom for daily service, or most periodic maintenance. Checkpoints are grouped beneath the hinged hood, and easily removable side panels give way to the coolers, maintenance-free battery, and fluid and air filters. If necessary, the operator station can be tilted in minutes for best-in-class drivetrain access. And industry-leading parts and service are just as accessible at more than 1,200 John Deere dealer locations from coast to coast.

1. Daily servicing is quick and convenient. Simply lift the hood for ground-level access to check fluids and to refuel.

2. Need extra elbow-room? Raise the boom for wide-open engine-compartment access. Unique lock lever secures the boom from inside the cab.

3. Hydraulic sight gauge and see-through coolant and windshield washer fluid reservoirs let you check levels at a glance.

4. Spin-on filters and environmental drains allow quick fluid changes.

5. Through-the-monitor on-board diagnostics help speed troubleshooting.

6. Because no maintenance beats low maintenance, serpentine belt and hydraulic engine-valve lifters never require adjustment.

*500-hour engine oil-change intervals when John Deere Plus-50 oil and John Deere oil filter are used.

Net engine power is with standard equipment including air cleaner, exhaust system, alternator, and hydraulic cooling fan at test conditions per ISO 9249. Gross power is without cooling fan. Specifications and design subject to change without notice. Wherever applicable, specifications are in accordance with SAE and ISO standards. Except where otherwise noted, these specifications are based on units with full fuel tanks and 79-kg (175 lb.) operators; 319D and 323D units with standard 320-mm (12.6 in.) tracks; a 329D unit with standard 400-mm (15.8 in.) tracks; and a 333D unit with standard 450-mm (17.7 in.) tracks.
