

# RULES TO LIVE BY

Regular cleaning of the machine, combined with other routine maintenance, greatly reduces the risk of fire.

---

Follow routine maintenance instructions found in the operator's manual. Your machine should be cleaned before and after use each day and throughout the day as needed.

## **In the event of a fire:**

- Stop the machine immediately at the first sign of fire.
- Get off the machine immediately and move safely away from the smoke and fire.
- Do not risk personal injury. If a fire is too far advanced, do not try to extinguish it.
- Call the fire department and give them your location.
