

ExtendAg

Management tools and services for agri-food businesses

Ingredient Management

Do you want to improve the performance of your ingredient supply chain?

Are your customers requiring assurances of food safety supported by an auditable traceability process?

Are you confident that you and your suppliers can protect your brand name in the event of a product recall?

John Deere Agri Services has answers. Our ExtendAg Ingredient Management solution provides first-stage processors and remanufacturers a collaborative tool designed to optimize the processes involved in the planning, production, storage, and shipping of ingredients. Business partners can streamline their operations and provide a higher degree of traceability in their supply chain.

Features

- Traceability from crop to raw product to ingredient to finished good
- Inventory of ingredients by location and quality control specification, including third-party locations
- Tracking of containers, e.g., bins, drums, totes
- Integrates with RFID or bar code technologies
- Electronic ordering and document flow
- Quality attribute product ranking system
- View shipping status and ETA of shipments
- Logistics planning and scheduling to optimize ingredient delivery

Benefits

- Allocation of supply based on quality attribute values corrects for the variability of raw product and ingredients, resulting in increased production yields
- Traceability Map™ enables more targeted recalls that significantly reduces the scope and costs of such activities
- Transparency of inventory in the pipeline reduces safety stock requirements
- Eliminates redundant administrative costs related to data entry and auditing
- Greater logistics control results in improved asset management, e.g., containers, that decreases replacement costs.
