You wrote the rules.

Customer Advocate Groups (CAGs) provided us with real-world insight, inspiring a host of innovations that make our 900M-Series Tracked Feller Buncher and 900MH-Series Tracked Harvester machines even more productive and reliable.

Improved cutting swath

The 900M- and MH-Series maintain the improvements introduced on the 900K-Series machines, including a 30-percent increase in cutting swath, from 3 to 4 m (10 to 13 ft.) on the standard boom, and by eight percent, to almost a foot, on the harvester boom. For more cuts with less machine movement.

Multiple boom-set/ attachment combinations

A variety of boom sets and felling heads can be combined to suit a wide variety of applications.

Rapid Cycle System (RCS)

Optional RCS uses a single, easy-tooperate joystick to quickly and simply control all boom functions.

Increased stability

Longer, wider undercarriage maximizes stability in all terrain conditions.

More swing torque

Swing torque has increased up to 13 percent on the MH-Series Tracked Harvesters, providing more power to boost productivity.

Effortless control

Fully adjustable armrests, including mounted keypads (available only on tracked harvesters), provide fingertip control of all machine functions. Optional fully adjustable suspension seat provides exceptional daylong comfort in the climate-controlled cab.

Sealed-switch module

Sealed touchpad keeps out dust, moisture, and debris, for longer switch life. Proven marine-grade control center eliminates rocker switches, numerous wires, and unsealed connections, and lasts up to 10 times longer than standard switches.

Improved visibility

Floor-to-ceiling front and side windows plus an overhead skylight expand the view of the cutting area by 22 percent.

Deere really took the time to get our input. And the machines just blow me away. I love the new cab design, the undercarriage, the visibility – everything is just that much better.

SIMPLE. AND SMART.

Best-in-class serviceability

Easy access to service components helps ensure daily checks and preventative maintenance get done on schedule, minimizing costly repairs down the road.

Hydraulic reversing fan

Reversing fan automatically reverses airflow to clean debris from the cooler cores. Fan runs at preset intervals, or if conditions demand more frequent cleaning, simply press a button to actuate the reversing cycle.

Work faster with TimberNavi™

Get a clearer picture of your operations with the optional new TimberNavi. This easy-to-use GPS-mapping technology provides locations of site features such as streams, roads, and electricity lines on a rugged color touchscreen display, enabling operators to work with confidence. Precise knowledge of machine position relative to cut-block boundaries will help you maximize efficiency, so you can move more wood to the landing at less cost.

Remote diagnostics

Get valuable insight with

JOHN DEERE FORESTSIGHT™

Through JDLink, alerts can be sent to your computer or mobile device — or your dealer, if you choose — to inform you of immediate machine issues. If downtime does occur, exclusive remote diagnostics and programming enable your Deere dealer to minimize the time and cost associated with sending a technician to the logging site for an initial diagnostic visit. You can also receive reminders of periodic scheduled maintenance on your computer or mobile device, or from your dealer.

Keep downtime down with

ULTIMATE UPTIME

In addition to the base John Deere ForestSight features, our dealers work with you to build an uptime package that meets your specific needs, including customized maintenance and repair agreements, onsite parts availability, extended warranties, fluid sampling, response-time guarantees, and more.
