*For connecting the Rate Controller to existing half-width disconnects on CCS machines.

*Controls two sections.

*Connects the Rate Controller to Hardi Pull-Type Sprayers.

*Required for NH3 applications.

*The 2510 Nutrient Applicator requires different height sensor brackets than what is included in PF90577. Order PF90577 to attain height sensor.

*The kit is used to install the Rate Controller inside the cab of the machine. It is typically used with the GreenStar Ready Universal Guidance Kit BPF10139 in non-Deere applications. The kit can eliminate the need for the Power Harness (BPF10403 and BPF10404), Front Extension Harness (PF90586 or PF90587), and the ISO Implement Connector Harness (part number RE174725).

*For connecting the Rate Controller to existing planter half-width disconnects on Kinze Planters. Controls two clutches.

*Connects the Rate Controller to Raven Liquid Fertilizer System.

*Connects the Rate Controller to the Raven Accuflow to control NH3.

*For connecting the Rate Controller to existing planter half or third-width disconnects on John Deere Planters.

*Connects the Rate Controller to pull-type sprayers currently running a Raven 440/450.

*Enables manual on/off of individual sprayer boom sections and provides auxiliary master on/off switch. Includes switchbox, harnesses, mounting bracket, and mounting hardware.

ATTACHMENTS FOR FIELD CONVERSION
Orders for Ag Management Solutions “Attachments for Field Conversion” CANNOT be combined with AMS product orders. Separate “Attachments for Field Conversion” orders are required. Multiple AMS attachments can be ordered on a single “attachments only” order.

AutoTrac Integrated Machine Kits:
Machines must be “GreenStar Ready” to be compatible with the AutoTrac Machine Kits below. AutoTrac Machine Kits include the appropriate machine steering controller when necessary and “AutoTrac Ready” accessories. Display, receiver and software to complete system sold separately.

PF90876 AutoTrac Combine Machine Kit - 50 Series (PIN 695101 and Above)
Integrated AutoTrac is not available with Field-Mapping or Field-Monitoring. If yield documentation is desired, customer must upgrade to at least Harvest Monitor. If Harvest Monitor is desired and the combine has a moisture sensor installed on the side of the clean grain elevator, the retrofit attachment PF90872 is required; order from ‘Attachments for Field Conversion - Harvest Sensor Kits’. If the combine does not have any sensors installed, attachment PF90874 is required; order from ‘Attachments for Field Conversion - Harvest Sensor Kits’. If no documentation or monitoring is desired, order AH211750 wiring harness from Parts.

**STARFIRE 3000 POSITION ACCURACY**

StarFire 3000 Position Receivers can be ordered in two configurations:  
- SF1 World Solution, a no-charge differential correction signal that provides non-row-crop accuracy.  
- SF2 Ready, a subscription-based differential correction signal that provides +/- 2 inch pass-to-pass accuracy.

RTK capability may be added to an SF2 Ready StarFire 3000 by adding a StarFire RTK radio, RTK radio cover, and RTK activation. Must have complete base station and machine kit for RTK. See Ag Sales Manual for configurations.

GNSS serial port information (NMEA) is available through a StarFire 3000 Receiver.

The StarFire iTC RTK Activation must be used in conjunction with a StarFire iTC SF2 Ready Receiver, StarFire RTK Radio and an AutoTrac SF2 Activation to obtain RTK Accuracy. Both the machine and base station require separate RTK Activations; however, a base station does not require an AutoTrac SF2 Activation.
