

# JDLINK™ CONNECTIVITY

## AT NO ADDITIONAL CHARGE

Now it's easier than ever before to maximize the productivity and uptime of your John Deere machines. Starting July 14, 2021, customers with active JDLink connectivity will no longer be required to renew their subscriptions. JDLink service can also be enabled on any compatible equipment already in your fleet at no additional charge. And when JDLink connectivity is enabled, you can choose to automatically activate all future JDLink-compatible machines, further streamlining overall fleet management.

*JDLINK CONNECTIVITY  
UNLOCKS ACCESS TO  
VALUABLE MACHINE DATA*

Designed to help customers manage their fleets, for over a decade the JDLink service solution has allowed owners and fleet managers to focus on what's most important — keeping their jobsites and businesses running — instead of needing to keep track of renewal dates, scheduled maintenance, and other time-consuming machine details.

Available on most new John Deere models, JDLink service provides customer access to

vital machine data such as location and utilization, idle time, fuel consumption, upcoming maintenance, alerts, and more, all from a web or mobile platform. Beyond machine monitoring, JDLink also enables John Deere Connected Support™, allowing the dealer to remotely identify critical issues and take action to minimize potential downtime or update software from off-site to help keep the machine operating efficiently.

To learn more about keeping your fleet running strong with JDLink connectivity **at no additional charge**, contact your dealer or visit [JDLink.Deere.com](https://www.jdlink.deere.com) today.
