Have you ever calculated your seed investment for a 10-hour day of planting?

Let’s look at a hypothetical example: A corn grower with a seeding rate of 34,000 plants per acre on 30-inch rows with a 24R30 1775NT is planting nearly 1.3 million seeds per hour at 5.5 mph or 2.3 million seeds per hour at 10 mph.

Assuming a bag of seed costs $274...

Either way...in a 10-hour day of planting, that’s a BIG investment.

With that many dollars in seed going through your planter meters each hour of the day, isn’t it worth the cost of a meter inspection to ensure you get the most out of that investment?

Don’t let worn parts wear on your bottom line.
