YOUR DAIRY,
YOUR WAY.

Running a successful dairy operation can be very labor intensive. That’s why so many dairy producers have come to rely on highly productive John Deere equipment. From our new L-Series Utility and Compact Loaders; to our small-, mid-, and large-frame G-Series Skid Steers and Compact Track Loaders (CTLs); to the more than 100 John Deere attachments that provide versatile connections across our compact product range, we have the machines to help you do your work, your way. LET’S GET IT DONE.
WITHIN EASY REACH
BET THE FARM ON IT.

The range of tasks you can tackle with a John Deere loader has just taken a turn for more. Our utility lineup has been reimagined with the high-reaching new 524L, 544L, and 624L, plus our compact range now includes redesigned 244L, 324L, and 344L models. Proven 204L and 304L Compact and 444K Utility Loaders round out the product offerings that help you reach for and realize more.

It hardly seems like work
New L-Series Utility Loader operator station has an improved HVAC system, extra legroom, and a more adjustable seat featuring a seat-mounted right-hand joystick with two programmable multifunction buttons and electro-hydraulic (EH) controls that are more intuitive to operate compared to our K-Series. Or opt for a premium cab with a larger monitor and a heated/ventilated premium seat.

Pretty big plus
Need reliable reach for dumping into feeders, hoppers, and wagons? New L-Series Utility Loader High-Lift Plus configuration provides an additional 24 in. of hinge-pin height over standard lift height and 12 in. over the High-Lift model.

Linked in
Lift path on all 524L, 544L, and 624L Z-Bar linkages has been improved to near parallel for better load-leveling capability. New loader linkage on the 244L and 324L improves the lift path to near parallel, for increased stability in fork operation and greater holding force than previous models.
The bucket list
Available on the 524L, 544L, and 624L, enhanced production buckets with integrated spill guards, curved side cutters, and greater rollback deliver better bucket-fill performance. New bucket and linkage designs improve load leveling, material retention, and visibility for more productivity than previous models.

Less delivers more
Add a light-material bucket to move large volumes of lighter materials such as grain, fertilizer, and even snow without the extra bucket weight.

Turn things around
Industry-exclusive Articulation Plus™ steering system on the 244L, 324L, and 344L enables tight turns with large loads, delivering more turn-tip capability and stability than standard articulation loaders.

Get attached
Optional skid-steer-style coupler on the 204L, 244L, 304L, and 324L can be actuated by push button to quickly and easily connect or release attachments without leaving your seat.

Overachievers
With up to 3-ft. 1-in. reach and 8-ft. 7-in. dump clearance, the 204L and 304L are highly able alternatives to skid steers for loading trucks and placing pallets.
DAIRY WORK SHOULDN’T BE A CHORE.
FLEXIBLE FARM HANDS

As a dairy farmer, your “to-do” list is never ending. Our G-Series Compact Track Loaders (CTLs) and Skid Steers are designed to help you take it on. Impressive pushing power, torque, bucket breakout forces, and lift heights help handle large loads with ease. Compact sizes enable maneuverability in close quarters. A wide range of model choices from small to mid to large frames and customer-inspired options allow you to match the machine to the application. These agile multitaskers can be ideal extra hands to have around.

The power of choice
Select vertical lift for increased stability and height when loading and lifting. Or choose a radial lift small-frame 312GR or 316GR Skid Steer for improved digging, grading, and backfilling.

When bigger is better
With their additional lift height and reach, increased boom and bucket breakout forces, and greater horsepower than their small-frame siblings, large-frame 331G and 333G CTLs and 330G and 332G Skid Steers are built to easily tackle your toughest dairy challenges.

Feel the boom
Mid- and large-frame models feature an electrohydraulic (EH) boom-performance package that provides bucket self-leveling in both the up and down directions, and programmable return-to-dig, return-to-carry, and boom-height-kickout settings to ease highly repetitive load and carry tasks.

Trim and slim
Slimmed-down wheel options enable small-frame 312GR, 314G, 316GR, and 318G Skid Steers to easily fit through openings as narrow as 60 in.

On the double
Need to run to the other end of the farm to pick up a hay bale or load the feed mixer? A two-speed transmission (standard on large-frame models; optional on small and mid frames) can really speed things up.

Room with a view
Front, sides, and rear — virtually unobstructed sightlines from the comfortable seat enable a clear view in all directions.

Pushing ahead
Outstanding pushing power and impressive breakout forces deliver sure-footed traction and leverage.
CONNECT.
PRODUCE.
REPEAT.
GET ATTACHED TO DOING MORE

Silage defacers, side-discharge or rollout buckets, pallet forks, or a bale hugger — our John Deere attachment lineup includes over 100 models ready to turn your machine into a flexible dairy dynamo.
Bale hugger lifts, moves, and stacks rectangular or round bales up to a 2,400-lb. load. Square bale tines and round bale spears feature low-profile designs for clear visibility from the machine.

7. Pallet Forks
Available in lengths of 42, 48, and 60 in., our pallet forks feature a brick-guard design for protection against load damage.

8. Rotary Tillers
Rotary tillers feature rugged construction, heavy-duty tines, and a tilling depth to 6 in. Bidirectional operation increases productivity.

9. Buckets
Rollout buckets feature an open design that enables quick, clean, and easy material loading. Numerous multipurpose, light-material, utility, rock, grading-heel, and other bucket types are also available in varying widths and capacities.

10. Brooms
Angle and pickup styles are available. Heavy-duty high-torque drive motors promote long-term dependability.

11. Steel Tracks
Self-cleaning design reduces ground pressure and helps improve traction and flotation in soft, muddy, or loose conditions. Smooths the ride over hard ground and gravel, too.
12. **Augers**
Planet drive with reverse rotation provides fast digging and quick back-outs. Choose from a variety of bit styles and diameters.

13. **Power Rakes**
Perfect for seedbed or site prep, power rakes feature easy forward and backward operation. Adjustable end plates provide box-scraper-like performance.

14. **Trenchers**
Choose 36-, 48-, and 60-in. digging depths in high- and standard-flow versions. Heavy-duty drive system eliminates chain reduction.

15. **Grapples**
High grapple forces, wide grapple capacities, and weld-in serrated cutting edges make rock grapples ideal for tasks such as land clearing, jobsite cleanup, and brush removal. Scrap grapples are designed for scrap handling, work at recycling centers, and in disaster cleanup.
MILK YOUR MACHINES FOR ALL THEY’RE WORTH.

There’s always plenty of work to do on your dairy farm. And you need to make the most of your time and efforts. At John Deere, we’re committed to helping you find the best machines for the job, whatever the job, so you can confidently RUN YOUR WORLD.
