Operations Center Update - September 2022

Operations Center provides simple but powerful management tools that enable access to data anytime, anywhere through the web, tablet, or phone.

Summary:

- Improved map experience
- Do more with easier Product management
- Equipment – the NEW equipment management tool **REPLACES** the Terminals tool

Detailed release notes:

Improved map experience

Check out the new map in Operations Center web for a more simplified experience of monitoring fieldwork and equipment from the office. In this map, you will find some of the same tools you used in the past along with newer features and some added tools from the map in Operations Center mobile

- Select multiple partner organizations to view equipment
- Location history complete with direction of travel and time filter
- Machine work state (working/idle/transport) available on the machine card and the equipment list
- Added equipment details such as fuel use, hours of operation, machine utilization and notification/alert history. Hours of operation and machine utilization are now available on mobile as well.
- Updated filters to quickly access fields or equipment, including equipment tags and favorites to group machines.
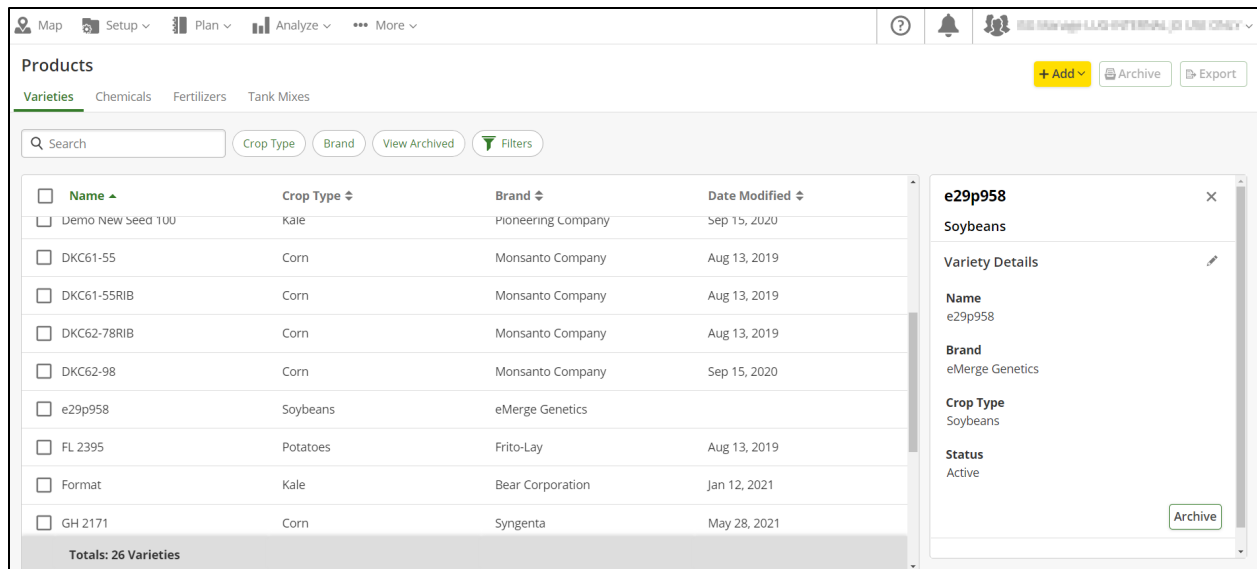

Easier management of Products

We continue to improve the Products tool to make managing the crop inputs that matter to you as easy as possible. With tabs separating product types and tank mixes, easy-to-read table views, and new panels that contain the details you need, when you need them.

Crops are not raised without products and inputs. Loading the products you use into Operations Center makes management easier. And when you plan work before you go to the field, the work starts and gets done more smoothly. Work Planner ties together your products, fields, equipment, and operators so your team knows what to do when it is time to get to work.

And everything performs better with the latest software on your Gen 4 display. See the link below, or your John Deere dealer, if you need help with updates.

Summary of updates to Products

- Total products management in ONE place
- Manage varieties, chemicals, fertilizers, and tank mixes in their own separate tabs
- Each tab has a table view with columns that can be sorted as needed
- New detail panel appears when you select a product within the table
- Add any new product you need easily

Help Information

TOTAL Equipment management in ONE place

You have total equipment management at your fingertips with more information than ever before – and in ONE place – in the new Equipment management tool!

Get the equipment details you need when you need it!

Summary of updates

- New equipment management tool replacing the Terminals tool
- New look and layout as other tools in JDLink and Operations Center
- Well known functions remain for equipment transfers and activating connectivity
- Separate tabs to manage machines, implements / attachments, and devices giving you the specific information you need to support your operation such as:
    - Connectivity type and status for equipment
    - Pairings of modems and displays, also including serial numbers of the devices

- o Easier ways to add and edit equipment
- o Characteristics and offsets
- Select a specific machine, implement, or device and get more details in a new right-hand panel that you can expand to full screen
- Parts and service information specific to your John Deere machines, as well as parts for many non-John Deere machines
