

REMANUFACTURED PARTS: REAL VALUE FOR CUSTOMERS

Remanufacturing takes used John Deere parts and restores them to like-new condition. Each part is disassembled, carefully cleaned, inspected, and remanufactured using original OEM parts. If a part doesn't meet the same standards as a new one, it doesn't make the cut. This isn't a quick fix or a simple repair. It's fully remanufactured to perform like new.

WHY CUSTOMERS CHOOSE REMAN PARTS

Remanufactured parts help customers keep their machines running longer at a lower cost.

- Typically cost 20–30% less than brand-new parts
- Built to meet or exceed original performance standards
 - Available off the shelf to reduce downtime

Reman parts come with the same John Deere backing customers expect with new parts. Many Reman parts are covered for up to two years, including labor when installed by an authorized dealer.

**Same
Warranty.
Same Support.**

Built for Value – Not Waste

Remanufacturing gives parts a second life. By reusing major components like engine blocks & housings, remanufacturing reduces the need for new raw materials while still delivering dependable performance customers expect.

Remanufactured Parts:

- ≡ \$ *save customers money*
- 🕒 *reduce downtime*
- 📦 *are reliable & warrantied*

This gives customers peace of mind and keeps their equipment working longer.

Remanufactured in the USA. Supporting American Jobs.

John Deere's remanufacturing operations support skilled manufacturing jobs in the United States. These facilities employ American workers who inspect, machine, assemble and test parts that go back into customers' machines.

John Deere Reman employs **more than 500 people** across its five U.S. remanufacturing facilities in the state of Missouri.
